

The Beginning

A device capable of switching between voice communication and stereo music with the push of a button.

A device able to stream high quality stereo music to both ears without a single wire.

Blending the style of today's hottest designer frames and the simplicity of a hands-free headset, TS™ offers the next step in hands-free and wireless stereo in one breakthrough device. The TS platform™ is poised to capitalize on several growing market trends and capture consumer interest worldwide.

TriSpecs® style and stereo meet your wireless phone.

Where high tech meets high fashion

Design

The miniaturized TS platform is capable of seamlessly blending into today's most fashionable frames.

Style and comfort are paramount when it comes to the things we wear. Exceptional engineering enables the TS™ platform to blend seamlessly into today's trendiest styles.

When designing technology, size does count.

The TS technology platform is 25% smaller than the next closest competitor in the market.

User Experience

As easy as wearing a pair of sunglasses, TS engineering delivers intuitive controls allowing for a simple user experience. Place one or both of the earbuds in your ear and you're done; our patented technology does the rest.

The touch of a button...

There are three buttons on each side of the device.

Voice

To answer an incoming call press the **OneTouch** button. To hang-up, just press the OneTouch button again.

To make a call the wearer can either use the OneTouch button and the call-by-voice feature or use the phone to start the call as one would do regularly.

1 VOL- 2 OneTouch 3 VOL+

Music

High quality stereo music is streamed wirelessly from a phone or MP3 player. While listening to music, if a call is received the song is paused and the wearer hears the preset ringtone. The incoming call can be answered or ignored and the song is then resumed without missing a beat.
